How To Become A Crypto Millionaire!

Discover The Most Powerful Strategy For Achieving Accelerated Financial Freedom

Old World Finance is Dead!

The banking and finance industry may not realise it yet, but with the advent of Bitcoin and the emergence of cryptocurrencies, the death-knell of traditional financial services has already been sounded.

During the next few years Bitcoin and its underlying Blockchain technology will disrupt the entire financial industry in ways we cannot yet completely understand or predict.

But what we do know, is that those who recognised the potential back in 2010 and invested in this nascent technology - when Bitcoin had its first market price of just 6 cents - have been handsomely rewarded for their foresight!

Imagine if you had spent \$1,000 buying Bitcoin back in August 2010, when it was only 6 cents a piece. By the time Bitcoin hit \$600 you would have made 10,000 times your original investment, or \$10 million dollars! And even more at the [current price](#).

Turning \$1,000 into \$10,000,000 is mind-boggling for sure, especially in such a short time. But this is the nature of disruptive technologies and the profit potential they represent.

Relatively speaking, I came “late” to the party, buying my first bitcoins in July 2011 at the princely sum of \$6 each - which was already 100 times greater than 6 cents just a year earlier. Since then of course, Bitcoin has continued to defy its detractors, those who have proclaimed it “dead” dozens of times, by continuing its rapid growth.

Now, all this can be quite depressing if you believe you “missed the boat” for this particular opportunity. And I personally know of many people who have expressed how they wished they had heeded my advice to buy some Bitcoin back in 2011, and who feel they have missed a “once in a lifetime opportunity”.

However, the truth is Bitcoin has a long way to go, with many well-informed commentators and analysts suggesting it could rise as high as \$100,000 or even \$1,000,000 per coin in the years to come. So there is still plenty of room to grow and financial gain to be had.

For example, if you purchased 10 bitcoins today at under \$1,000 and it rose to \$100,000 in the next few years, your \$10,000 investment would be worth at least 100 times more, or \$1,000,000. How and where else is it possible to become a millionaire in a few short years, starting with only \$10,000?

What if Bitcoin rose to \$1,000,000 instead? In that case even the purchase of a single Bitcoin for under \$1,000 would yield \$1 million. So ask yourself, would you want to miss out on such an opportunity and look back in a few years, kicking yourself for not taking action?

Now you are probably thinking: *“It cannot be possible for Bitcoin to rise that much in price! The whole idea is too risky and based on too optimistic a scenario.”*

Yes there is risk. No one knows for sure what Bitcoin will be worth in the future, but there are plenty of use-cases and scenarios that make such predictions possible. And when it comes to risk you always have to look at the potential reward and consider if the risk is worth taking. And in my view, risking \$1,000 for a \$100,000 gain would be well worth it. So the question is, under what conditions *could* Bitcoin be worth \$100,000 to \$1,000,000?

Predicting future prices must take into account the fact Bitcoin has a limited supply of just 21 million coins, with each one divisible by 8 decimal places. This is one of the reasons Bitcoin is often referred to as “Gold 2”, meaning its scarcity drives up the price when demand rises. And why would demand rise? There are many reasons, including the following:

Currency Debasement: To fully grasp the scale of this you only need to remember what things used to cost when you were young. It’s not that prices have risen since then, rather that money has become worth less. And when money loses value rapidly things can get out of hand, like in Venezuela where the population is being impoverished by hyperinflation.

Economic Crisis: There is plenty of evidence we are in for another economic shock in the not-too-distant future, which many commentators believe will make the 2008 financial crash look like a picnic. Whenever there has been a major crash in the past, people have always turned to gold as a safe haven. Bitcoin has already established a similar safe haven status.

Political Instability: The world we live in is increasingly fragile as the old order is being challenged and overturned at an increasing pace. Witness the turmoil caused by the UK’s Brexit vote or the emergence of President Trump in the USA. Such political shocks cause nervousness and concern in global markets and once again drives money to safe havens.

World War: Nothing causes panic and mayhem in financial markets more than war. The danger we face today is the real possibility of a war breaking out between major nuclear armed nations. Such an event would have a massive impact on every single person on this planet and have a catastrophic effect on global markets.

War on Cash: It’s an open secret that developed nations want to abolish cash. Their reasons include such things as being more efficient, fighting criminality and terrorism, and of course eliminating tax evasion. Trouble is, without cash the only place you can keep your money is in the bank! And while banks were considered trustworthy and safe in the past, this is no longer the case. As an alternative digital cash, Bitcoin’s price will certainly rise as a result.

All of the events listed above will cause people to seek a financial safe haven, which has traditionally been gold and silver. However Bitcoin, as “Gold 2”, has many features that gold lacks, including being easily transportable, transferable online, easy to transact with, very secure with a high level of privacy, and of course the aforementioned store of value quality as a result of its strictly limited supply. As a result, Bitcoin’s price would clearly increase as a result of such events. And to get some idea as to how much, consider the following.

The total value of gold in the world is approximately \$8.2 trillion, based on [this data](#). That’s a really **big** number, as a trillion is 1,000 billion and a billion is 1,000 million. So to write a trillion as a number requires 12 zeros - or 1,000,000,000,000.

If Bitcoin were to capture just 10% of the existing gold market by 2020, the total value of Bitcoin would be \$800 billion. By then there will be 18 million bitcoins in circulation, so the value of each one would be \$44,000 in this example. And if Bitcoin captured 20% of the gold market, then this safe haven use case alone could drive the price up to \$88,000.

The truth is, there are multiple use-cases for Bitcoin and a gold-like safe haven asset is just **one** of them. For consider the following:

Global Remittances: This is a big one and ripe for full-on Bitcoin adoption. The total value of global remittances - people sending money back to their home country - is \$585 billion per year. The top four countries for global remittance volume are China at \$54.9 billion, the Philippines at \$26.7 billion, France at \$23.3 billion, and Mexico at \$23 billion.

Global Unbanked: There are 2.5 billion people on this planet who are “unbanked”, without access to traditional financial services. But they virtually all have mobile phones! Technology can enable such people to leapfrog over the “old” banking industry and adopt Bitcoin, giving them immediate access to the whole world.

Global Gambling: This is another perfect “fit” for Bitcoin, due to the difficulty those in the gambling businesses have with traditional financial services. The global *legal* market alone is estimated to be \$700 billion a year, while the *illegal* market, including sports betting, is up to a staggering \$3 trillion!

Global Drugs Market: One of the obvious consequences of drug prohibition policy in most countries of the world is the massive illegal drugs market, which has an estimated value of \$4 trillion - a massive number. Once again, Bitcoin offers users an alternative and more private way to pay for it all.

While some of the above additional global markets may be unsavoury to many people, one cannot ignore the fact they exist and that Bitcoin could become the payment method of choice for many of the people involved - pushing demand for Bitcoin even higher.

When you do the numbers on both “safe haven” and the additional use cases above, it’s not hard to imagine the future value Bitcoin being \$100,000 or more. But there is another way to look at it, and that’s to consider the simple fact that more and more people are becoming involved in it for a wide variety of normal every-day reasons.

Whether for investing, trading or simply buying and selling stuff, ordinary folk are moving into the Bitcoin space at an increasing rate. And at some point in the future this gradual migration to “better money” could turn into a stampede towards mass adoption!

Consider this: There are 7.5 billion people in the world. If only 10% of them, or 750 million, held an equal amount of Bitcoin based on a maximum supply of 21 million and a price of \$1,000, then each person would own just 0.028 Bitcoin - or \$28 worth. So if those same people wanted to invest an average of 100 times that \$28, or \$2,800, the Bitcoin price would also need to be 100 times more, or \$100,000, to accommodate such demand.

If you add up all the quoted values of the different global markets listed here, you will soon realise that Bitcoin can indeed become a major financial force, with a price far in excess of what we see today. So even though many people think they have “missed the boat” and that Bitcoin is already too expensive, the truth is they haven’t, and it isn’t!

An Early Adopter Opportunity You Won’t Want to Miss

While it’s true that early adopters of Bitcoin stand to gain massive returns due to their foresight, the opportunity for such huge financial gains certainly doesn’t end with Bitcoin. The fact is, it has opened the door to limitless innovation in the crypto technology field, leading to a plethora of other cryptocurrencies that could be highly profitable in the future

Let me give you just **one** example. I have identified a potentially world-changing crypto technology with massive disruptive potential, which is still in pre-beta development and effectively under the radar. And the good news is, right now it can be purchased for a few cents per coin. Given what you now know of Bitcoin’s own history and potential, wouldn’t you want to know about this new crypto and have the opportunity to invest in it?

Well, that’s what I have done. You see, over the past 24 months or so I have been following its development and believe it could have a big global impact. When I first heard of it and read the “white paper” my mind was all a buzz, because I knew I was looking at something potentially just as big as Bitcoin, but in a different but equally important technological sector. So I immediately purchased 50,000 crypto-coins for just 1.5 cents each.

Since then I have purchased a lot more and have been following progress with great interest, taking part in test-net trials and getting a hands-on feel for what this technology is capable of. And let me tell you, if this succeeds the way I believe it can, then there’s a genuine early-adopter opportunity here - one which could pay off handsomely in the near future!

Right now this particular technology is still in pre-beta release, meaning it's not ready for prime time just yet. But during the next few months a series of public alpha versions are being released, to be followed by public beta versions - before the full final release.

For those who are fortunate enough to learn about this particular technology and its potential disruptive impact on society, *before* it hits the mainstream, there is a unique opportunity to make huge financial gains - if you act now.

At the time of writing this report, the current price of this cryptocurrency is around 10 cents, which is already nearly 7x what I originally paid for it. But I believe this could quickly rise 10x to \$1 within the next few months, with the potential to rise 100x in the next 12-18 months - or a medium term target price of \$10.

In other words, even \$1,000 invested in this crypto now could yield up to 100x or \$100,000 within a relatively short period of time. And just as easily, \$10,000 invested now could yield \$1 million in the same timeframe.

Of course, its price could continue to rise a lot higher with a successful public launch and growing adoption over time. And given what I know about this project, a 2-5 year price target could easily be in the range of \$25 to \$50, or even more.

The Million Dollar Question

So the question you should be seriously asking yourself is, *"How can I get a piece of this action and give myself the chance to become a crypto millionaire?"*

In this report I have outlined how it's possible to dramatically improve your financial situation by understanding and acting on future trends now, in order to profit later. I have proven this early adopter strategy myself with my own early move on Bitcoin - a decision I'm always glad I made! The fact is, there's a new world emerging before our eyes, and for those who can see and understand this and have access to the right information, there are exciting opportunities available to achieve accelerated financial freedom.

It's no longer useful or even wise to follow "old" financial and investment advice. The world is changing too fast, and what worked in the past is not working so well any more. We are on the brink of such massive social and economic change that it's like being on a new frontier - with all the profitable opportunities that such change can bring.

The key to benefiting from this new reality is to be fully informed - to have a plan of action for securing your financial future in this fast-changing world. And that's the purpose of this report, to introduce you to a powerful information resource for achieving just that - the *Crypto Wealth Blueprint*.

The Crypto Wealth Blueprint

As a passionate early adopter of Bitcoin since 2011, I've closely followed developments in the cryptocurrency space, written various reports and recorded numerous *YouTube* videos on the subject. And as a result, I decided to use my knowledge and experience to provide a unique information resource for those who want to take advantage of this exciting technology to secure their own financial future.

I call it the *Crypto Wealth Blueprint* - a step-by-step action plan and strategy that, if followed, could make you a crypto millionaire in the next few years. It reveals everything you need to know - by way of educational modules, insightful reports, ongoing commentary, video tutorials and a discussion forum - in order to achieve accelerated financial freedom and dramatically change your financial future. The *Blueprint* includes the following:

How to Get Started With Bitcoin: The most difficult thing to do with regards to Bitcoin is simply get started, to overcome inertia and have the courage to step out into a new world and liberating financial experience. I have written a series of additional reports and recorded step-by-step videos that will ensure you get started right, avoid any pitfalls and lay a good foundation for your future financial success. You will learn how best to purchase Bitcoin, how to store it safely, and how to spend it with ease when you need or want to.

How to Earn Bitcoin: Yes you can certainly *buy* Bitcoin, and if you have money to spare then I would recommend doing so. If Bitcoin goes up 100x over the next few years then \$10K invested now could turn into a cool \$1 million! However not everybody has or wants to risk \$10,000. That's where *earning* Bitcoin becomes an attractive option. The *Crypto Wealth Blueprint* includes a powerful leveraged strategy for starting with a modest sum of money and growing it exponentially so you can make a meaningful investment in Bitcoin.

How to Profit From a New Early Adopter Opportunity: The early adopter phase of Bitcoin has passed, but if you follow the Bitcoin earning strategy that's part of the *Crypto Wealth Blueprint* you could still multiply your money 100x over the next few years. However, the other crypto-technology discussed in the *Blueprint* offers a **new** early adopter opportunity which could multiply your money up to 500x. It reveals what this new cryptocurrency is, the underlying technology that supports it, and how to buy and store it securely. The fact this cryptocurrency is only a few cents at present means you could turn a modest sum of money into something truly life changing.

How to Become an Expert in All Things Crypto: With unlimited access to the *Crypto Wealth Blueprint* you won't be left out in the cold wondering what to do next. You will not only have the specific success strategies laid out in the *Blueprint*, including the leveraged Bitcoin earning opportunity, but all my accumulated knowledge and experience via my reports and videos. You'll also be able to ask questions and share information and experiences with others in our discussion forum. This feature alone could be worth the purchase price!

How to Achieve Accelerated Financial Freedom: You can get immediate access to the *Crypto Wealth Blueprint* for a one-time payment of just **\$197**, with no recurring or monthly fees. This gives you unlimited private login access to all the information resources, which includes comprehensive instructions for getting started, videos explaining every action step, special reports and a discussion forum where you can get all your questions answered.

How to Grow Your Bitcoin Freedom Fund: My purpose in creating the *Crypto Wealth Blueprint* is to provide a comprehensive information resource that includes practical tools and strategies so you can profit from such knowledge. One such strategy is to have a way to **earn** bitcoins by participating in our lucrative affiliate opportunity and generate commissions from the sale of the *Blueprint* - commissions which are receivable in Bitcoin.

In this way you're able to not only boost your income, but also accumulate Bitcoin. As an affiliate you'll have your own business back office and personalised marketing system, all at no additional cost. You will then have everything you need to start building your crypto wealth and the means of generating the income you need to get started.

It's my intention to get this important and profitable information into the hands of as many motivated people as possible. Having an affiliate programme is a very effective way to spread the word and reward those who assist in this endeavour. And to ensure no one is left behind, I have created a hybrid affiliate programme that offers **two** options, ensuring this once-in-a-lifetime opportunity is available to **everyone** who wants it.

Premium Affiliate: If you purchase the *Crypto Wealth Blueprint* you immediately qualify for the top-earning commission plan.

As an *Premium Affiliate* you earn **\$100** commission on each personally referred sale of the *Crypto Wealth Blueprint*. That's generous of course, but there's more to be made. You can also earn additional passive commissions when those you refer make sales themselves, providing you with an excellent leveraged Bitcoin income opportunity. These additional commissions are made possible by a three-tiered payment plan which works like this: Personal direct sales earn you **\$100** commission. Second tier sales earn you **\$40**. And third tier sales earn you **\$20**. That's a massive 80% plus total payout on the purchase price.

Free Affiliate: If you're short of cash for any reason and are unable to purchase the *Blueprint* right now, you can still become an affiliate, earn commissions and work your way "in".

As a *Free Affiliate* you earn **\$50** commission on each personally referred sale of the *Crypto Wealth Blueprint* - which is half the rate *Premium Affiliates* earn. There are no second or third level commissions payable in this case. However, after you have made four sales the 4x\$50 commissions you "missed out" on (compared to *Premium Affiliates*) are credited back to you by way of **free** unlimited access to the *Blueprint* - a **\$197** value. You'll also be automatically upgraded to the *Premium Affiliate* commission plan as outlined above.

How Much Can You Earn? For illustration purposes only, here's an example of potential earnings as a *Premium Affiliate*: If you personally made 20 sales then your direct commission would be 20x\$100 or \$2,000. If half of those referrals (10) made 10 sales each, then your tier two commissions would be 100x\$40 or \$4,000. And if half of those tier three referrals (50) also made 10 sales each, then your tier three commissions would be 500x\$20 or \$10,000 - that's \$16,000 in total.

Of course real life is never so symmetrical or perfect and some affiliates would likely make only a few sales while others would sell a lot more. But you get the idea. The important thing to remember here is that you can receive all such commissions in Bitcoin, which is itself rising in value. So for example, if you earned \$5,000 in commissions as an affiliate and that got you 5 bitcoins (say under \$1,000 each), then by the time Bitcoin reached \$5,000 per coin you would have \$25,000 worth. But imagine your financial gain if those same 5 bitcoins rose in value to \$40,000 each - which is certainly [possible](#) - you'd be sitting on \$200,000.

Now *that's* what I call leverage!

How to Get Paid in Bitcoin: Earning leveraged commissions is great of course, but it's even better if you can receive them in Bitcoin. Well you can, using our payment processor which makes it possible. When you purchase the *Crypto Wealth Blueprint* you will do so using [Payza](#), a payment system which can be funded by credit or debit card and bank wire, plus many other options including Bitcoin.

The good news is, you'll also be **paid** your affiliate commissions to this same account and have the option of withdrawing them as Bitcoin. In other words, every commission payment you receive in your Payza account - from direct, second and third tier sales of the *Crypto Wealth Blueprint* - can be withdrawn to your own Bitcoin wallet. However, you always have a choice and if you prefer, all or part of your commissions can be withdrawn to your bank account or debit/credit card - or even Payza's own debit card.

Watch this short [video](#) for an overview of Payza, so you can see how this process works.

How To Get Started Today: If you're motivated to achieve accelerated financial freedom and become a crypto millionaire within the next few years, then I urge you to make a positive decision today and change your life for the better.

For just **\$197** one time you'll get unlimited access to the *Crypto Wealth Blueprint* and be able to tap into all the knowledge, resources, tools and opportunities you need to dramatically improve your financial status - and secure your future in ways you may only have dreamed about! You'll also qualify for immediate *Premium Affiliate* status and be ready to start building your Bitcoin freedom fund. And if \$197 is beyond your reach right now, you can still become a *Free Affiliate* and earn your way in.

How To Get Registered Correctly: Whether you intend to purchase *The Crypto Wealth Blueprint* now and become a *Premium Affiliate*, or simply register as a *Free Affiliate*, it's important to follow the correct registration process.

If you intend to be an affiliate you should open a free *personal* account with [Payza](#) - if you don't already have one. This account is needed for receiving affiliate commissions. By getting your account set up now you'll be able to enter your Payza info on the affiliate registration page, although you can also complete that later if you prefer.

- To purchase *The Crypto Wealth Blueprint* only, complete **Step 1**.
- To purchase the *Blueprint* **and** become a *Premium Affiliate*, complete **Steps 1 and 2**.
- To become a *Free Affiliate* only, complete **Step 2**.

Step 1: [Purchase The Crypto Wealth Blueprint](#)

Watch this [video](#) for important information regarding making payment using Payza.

Step 2: [Register as an Affiliate](#)

Keep in mind that the username you register as an affiliate will be part of your affiliate link, so don't make it too long and don't use an email address.

Whatever option you choose, you will soon be well on your way to building your crypto wealth!

To your financial freedom

David MacGregor

P.S. As an affiliate for the Crypto Wealth Blueprint you will have your own personalised referral link which points to the free report. All promotion for the Blueprint is done using this report only, and your task as an affiliate is to simply offer and promote it to an ever-growing global audience of those who want to know more about Bitcoin and cryptocurrencies.

P.P.S. The crypto technology revolution is here and now. Don't miss the boat and look back in a few years time, only to regret not taking action when you had the opportunity! However, it's important keep in mind that all crypto investment opportunities carry risk and that you should never use money you cannot afford to lose.
